CHILD SAFETY

It's your first priority, but child and pet safety is often the last thing you think about when choosing window coverings. Did you know that the most common window products in homes are not child safe? Those horizontal blinds that were there when you moved in are a potential strangulation hazard for your little ones. As our infographic shows, accidents still happen with those long cords.

BEST FOR KIDS™ CERTIFICATION PROGRAM

The Best for Kids™ certification label makes it easy for parents and caregivers to identify products that are best suited for their home.

To become certified, Lafayette Interior Fashions must meet the specified program criteria and submit their window covering products to a designated third party testing laboratory. To pass the tests, the products may not have:

- operating cords
- inner cords that are accessible
- cords that create a hazardous loop or potential wrap-around hazard

ADDITIONAL SAFETY MEASURES

The window covering industry uses warning tags, labels, and other methods to communicate potential hazards. The warning shown here communicates the important message that cords are a potential strangulation hazard and suggests choosing cordless or inaccessible-cord alternatives. Together with the Window Covering Safety Council, we encourage you to install only cordless window coverings in rooms where children play and sleep.

For kids' sake, we offer a wide array of lifting system options, from cordless and motorized operating systems to retractable lift cords, cord tensioners, and wand controls for enhanced child safety.

All Lafayette products that utilize a clutch system are sent with a Cord Tension Lock. The Cord Tension Lock must be secured to the wall to provide the necessary tension for the shade to operate.

All **motorized** window treatment products offer child safe operation since the motor unit provides the mechanism for raising and lowering the shade.

For additional window treatment child safety information, please visit the Window Covering Safety Council (www.windowcoverings.org).

Shade Operation

The transition of light is created with dual layers of fabric alternating between sheer and semi-opaque or opaque horizontal fabric vanes. As the fabric moves the layers bypass on the window creating different levels of light-filtering options. You can raise and lower your shades while still controlling the amount of light and your view.

Ordering Notes

- [Vane Alignment](#) - **Must be requested at time of order. We can not guarantee vane alignment for more than 4 shades together.**

Caution

- Accu-Rise is meant to be raised or lowered by applying controlled, level, pushing or pulling force to the center of the bottom rail. Acute application of force can cause fabric to roll over itself and/or cause the material to tear. Operating the shade off center will cause skewing damage to the ends of the fabric. Care should be taken when using the handle on Accu-Rise shade with fabric wrapped bottom rail. Do not allow the handle to move along the bottom rail or fabric could be damaged.

Shade Operation

- The transition of light is created with dual layers of fabric alternating between sheer and semi-opaque or opaque horizontal fabric vanes. As the fabric moves the layers bypass on the window creating different levels of light-filtering options. You can raise and lower your shades while still controlling the amount of light and your view.

Caution

Place the fabric preserving tab on the edge of a solid fabric vane at the optimal operation level of the shade. Always avoid direct contact with the fabric. Natural oils found in our skin can cause even clean hands to leave permanent stains on some fabrics.

Shade Operation

Transitional Shade sidelights are operated by gently pulling up or down on the fabric preserving tab placed on a solid fabric vane. Moving this tab up or down will cause the fabric to begin rotating around stationary rails mounted directly to the top and bottom of the sidelight. (See image below) Operation of the Sidelight Transitional Shade allows changes to the vane openness but will not change the overall width or height of the shade.

Measuring & Installation Information

Best Practices for Measuring

- Always use a steel tape or a metal ruler for measuring.
- Always measure every window even though they look the same.
- Check for obstructions that could affect operation of the shade.
- For Inside Mount (jamb to jamb in a window or door, wall to wall in a room), give exact inside to inside width measurements, and top to bottom length measurements of the area to be covered.
- Measure the width in at least three places and specify the narrowest width.
- Measure the length in at least three places and specify the shortest length.
- Take two diagonal measurements. If there is a greater than 3/8" difference in diagonal measurements, outside mount is strongly recommended to avoid irregular light gaps.
- For Outside Mount, measure the exact width and height of the area to be covered.

Measuring for Allure Shades

- All shade pricing is based on the width and the window opening height. Orders are accepted for inside or outside dimensions, to the nearest 1/16".
- It is critical that the shade brackets be mounted so that the shade is level when installed.
- For an Inside Mount, measure the exact width between the jambs (inside) where the shade is to be mounted. If the end caps are not tightly secured it is possible the shade will not fit in the opening.
- For an Outside Mount, we recommend that the brackets be placed to allow a minimum of 1 1/2" to 2" overlap on each side of the casement. Measure between the point where the brackets are to be placed and specify that as an outside width.
- For Length, measure the full length of the window opening from the top frame to the lower sill to determine your window length.

General Advisories

Please examine all merchandise and packages for accuracy and make sure all parts, brackets, etc. are included **before** sending them to be installed. While we constantly strive to make sure each order is exact and complete, we do occasionally make mistakes, and **we cannot be responsible for trip charges or reinstallation charges. Repairs or remakes must be requested within 30 days of invoice date.**

Allure Care & Cleaning

The operating system of the Allure Transitional Shade dusts the fabric when the panel is rotated thereby reducing the care necessary for the shade. The shade can be feather dusted or vacuumed at a low setting. Allure fabrics are primarily Polyester. Spots can be cleaned with a damp sponge and mild soap. To avoid discoloration, do not use chemical cleaners. Ultrasonic cleaning is not recommended.

Palladian Window Shelf

- Double beaded hardwood shelf designed to mount horizontally in arched or angled openings to serve as divider and mounting surface for any window fashions product
- Allows area above shelf to be covered differently or uncovered
- Finishes available from Heartland Woods
- Palladian shelf has a 1/32" per foot tolerance for warpage
- Inside Mount Applications only

Size Standards

- Height: 1 1/2"
- Depth: 4" (Can be cut down to 2" minimum upon request)
- Maximum Length: 8'

Ordering Notes

- Must be installed below the radius of window as routed ends are square
- Specify exact width from jamb to jamb. A 1/16" deduction will be taken by Lafayette
- Ordered separate from Allure Shade (Priced by lineal foot - round up from exact width to next highest lineal foot)
- Exclusions: Outside mount applications

Oeko-Tex™ Rating for Mirage Fabric

The Oeko-Tex Standard 100 provides the textile and clothing industry with a globally uniform standard for the objective assessment of harmful substances. Raw materials, intermediate and end products at all stages of processing throughout the manufacturing chain, including accessories, are tested and certified. Certification is obtained by application in writing from the manufacturer to one of the authorized test institutes or official offices around the globe. The samples submitted are tested exclusively in the member institutes in Europe and Japan in order to ensure a consistently high level of testing. The mark "Confidence in Textiles - Test for harmful substances according to Oeko-Tex Standard 100" states that the marked product fulfills the conditions specified in this standard, are under the supervision of an institute belonging to the International Association for Research and Testing in the field of Textile Ecology (Oeko-Tex). The mark is not a quality label. The mark relates only to the as-produced state of the textile and says nothing about other properties of the product such as e.g. fitness for use, reaction to cleaning processes, physiological behaviour in respect to clothing, properties relating to use in buildings, burning behaviour etc.

Flame Retardant (FR) Coating or Antimicrobial

- A flame retardant or antimicrobial coating is available for Allure fabrics without these inherent properties. The shade is fabricated then sent to an external facility for the flame coating or antimicrobial process. Allow four to six weeks extra delivery time for this service. Standard shipping is included. Call for quote on flame retardant or antimicrobial coating.
